

Shipp & pay combi

Note: this documentation is draft, more detailed documentation will come in a few weeks ...

Magento itself suffers from the lack of possibility to set the relation between payment and shipping methods. Fortunately, this module solved the problem.

In the basic installation of Magento, there is not the possibility to set the dependence between shipping and payment methods. This module solves the problem and adds the possibility to define the relation between those two methods.

Let's take an example: As a seller, you offer the possibility to have the goods shipped by Česká pošta or overtake the products personally. Payment in cash, Amount brought and Cash on packet are then available as payment methods. This module then allows you to set personal overtake only in the case of payment as cash, and other combinations of payment and shipping methods.

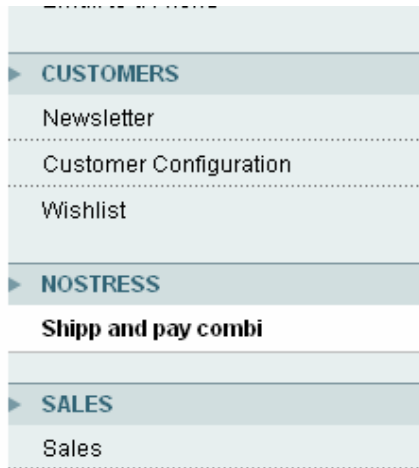

Instalation

Instalation instructions are available at:

- <http://www.nostresscommerce.com/our-services-and-products/nostress-connect.html>

Použití modulu

Select System -> Configuration -> NoStress -> Shipp and pay combi.

First, you must activate the module in checkbox *Allow ship and pay combi modul*.

Then you can set up combination of payment and shipping methods as you wish. Only active methods are visible.

Current Configuration Scope: Default Config

Allow shipp and pay combi modul: No

Shipping method	Payment method	
Flat Rate	Hotově	Delete
Flat Rate	Převodem na účet	Delete
Obchodní balík České f	Platba při převzetí (dobí	Delete

Add combination

Necessary modifications of phtml templates

The following text is made only for Default design in standard Magento installation. If you use some other design, the module can work not in the proper way. In case of any problem, contact NoStress Commerce and we will help you with the installation of the module.

For the appropriate functionality of the module, there is necessary to change this template:

- `app/design/frontend/default/default/template/checkout/onepage/payment/methods.phtml`

During plotting of each payment method, the module calls to realise if given payment method is allowed towards the shipping method chosen. This function tries to find chosen combination of payment and shipping method in the chart `Nostress_Spippaycombi`.

After the installation of the module through NoStress Connect, there will appear the new template:

- `app/design/frontend/default/default/template/checkout/onepage/payment/methods_shippingpaycombi_sample.phtml`

This template must be renamed to `methods.phtml` that rewrites the original template.
